Service access [Info](#)

Edit

Configure the service role and EC2 instance profile that Elastic Beanstalk uses to manage your environment. Choose an EC2 key pair to securely log in to your EC2 instances.

Service role

aws-elasticbeanstalk-service-role

EC2 key pair

aws-eb

EC2 instance profile

aws-elasticbeanstalk-ec2-role

Networking and database [Info](#)

Edit

Configure VPC settings, and subnets for your environment's EC2 instances and load balancer. Set up an Amazon RDS database that's integrated with your environment.

No options configured

Instance traffic and scaling [Info](#)

Edit

Customize the capacity and scaling for your environment's instances. Select security groups to control instance traffic. Configure the software that runs on your environment's instances by setting platform-specific options.

Instances

Metric	Statistic	Unit
NetworkOut	Average	Bytes
Period	Breach duration	Upper threshold
5	5	6000000
Scale up increment	Lower threshold	Scale down increment
1	2000000	-1
Load balancer		
Load balancer visibility	Load balancer type	Load balancer is shared
public	application	false
Store logs	IP address type	
Disabled	ipv4	

Updates, monitoring, and logging [Info](#)

Edit

Define when and how Elastic Beanstalk deploys changes to your environment. Manage your application’s monitoring and logging settings, instances, and other environment resources.
